The outer 12" plates should be approximately 6'6" from the top of the plate to the ground. The Inner two 10" plates should be 5'6" from the top of the plate to the ground. A relative difference in height such that the outer 12" plates are 12" higher than the inner 10" plates is important. The 12" stop plate should be 5'6" from the ground. Absolute height is less important than the difference in height between the inner and outer plates.
